

Year 6	Place	Space	Scale	Environmental impact and sustainability	Interconnection
All modules use an approach for assessing what children already know as well as building on the knowledge they have already acquired during their time at Chaddlewood.					
Extreme Earth	<p>The children will identify the different layers of a volcano and explore the process in which these layers are formed. This will include the crust, the mantle and the core.</p> <p>The children will begin to think about the impact and influence that volcanoes have had on the Earth's physical landscape over time.</p> <p>The children will identify how the shape and position of continents has changed (the continental drift).</p>	<p>The children explore how many and identify where the world's volcanoes are located on the edge of the Pacific plate in the 'Ring of Fire'.</p> <p>The children will be able to identify and locate volcanic regions around the world.</p> <p>The children will explore how tectonic plates are constantly moving at a very slow rate and how this affects the natural environment over time.</p>	The children will widen their perspective to a global level looking at the tectonic plates on the Earth's surface.	<p>The children will investigate the correlation between the faults found at tectonic plate boundaries and volcanic activity.</p> <p>Children will find out and make comparisons about the minimal impact that volcanoes have on climate change compared to that of human activity.</p>	Children will explore the relationship in which human settlement is influenced by the 'push' and 'pull' factors determined by the location and status of a volcano (active, dormant or extinct).
Campania and Devon	The children will draw comparisons of the physical features of Devon and Campania	The children will locate Devon and Campania on a map and be able to describe the	The children will make comparisons between two places on an international scale.		The children will begin to look at the relationship between imports and exports

	including: Dartmoor and the Devon coastline; Mount Vesuvius and the Campanian coastline.	location of these places. The children will compare how the land area (and population) of Campania is significantly larger than that of Devon.			and how it sustains an economy. The children will be able to compare the economies of Devon and Campania by studying economic and labour market data.
